We're transitioning from single-use plastic to paper-based packaging. As we progress, you may find a mix of paper and plastic in our boxes.

Wir stellen von Einwegkunststoff-Verpackungen auf Verpackungen auf Papierbasis um. Möglicherweise findest du in der Übergangszeit sowohl Papier als auch Kunststoff in unseren Boxen.

Nous passons progressivement des emballages en plastique à usage unique aux emballages à base de papier. Au cours de cette transition, il est possible que vous trouviez à la fois du papier et du plastique dans nos boîtes.

Stiamo passando dalla plastica monouso agli imballaggi basati su carta. In questo periodo, potrete trovare un mix di carta e di plastica nelle nostre confezioni.

Estamos cambiando las bolsas de plástico desechables por bolsas con base de papel. Conforme avanzamos en este propósito, puede que encuentres una mezcla de papel y de plástico en nuestras cajas.

Estamos a fazer a transição do uso de plástico descartável nas embalagens por embalagens à base de papel. À medida que progredimos nesta transição poderá encontrar um misto de papel e plástico nas nossas caixas

Átállunk az egyszer használatos műanyagról a papír alapú csomagolásra. Az átállás folyamatos, ezért előfordulhat, hogy papír és műanyag zacskót egyaránt találsz a dobozainkban.

Mēs pārejam no vienreizlietojamās plastmasas uz iepakojumu, kurā izmantots papīrs. Pārejas procesa laikā kārbās var būt gan papīra, gan plastmasas daļas.

Facem tranziția de la ambalajele de unică folosință din material plastic la ambalaje pe bază de hârtie. Pe măsură ce avansăm, s-ar putea să găsești un amestec de hârtie și material plastic în cutiile noastre.

我们正在从一次性塑料包装向纸质包装过渡。在此过程中，你可能会发现我们同时采用纸质包装和塑料包装！

A beacon of safety

*Pigeon Point Lighthouse,
1872, one of the tallest
lighthouses in America*

*Souter Lighthouse, 1871, world's first
lighthouse built to use electricity*

*Île Vierge, France, 1902, world's
tallest traditional stone lighthouse
(82.5 meters/271 feet)*

For as long as humans have travelled the seven seas, safe navigation has been vital to explorers and travellers, fishermen and merchants, navies and blue-water sailors. Stone arrangements, bonfires, cressets or braziers were used as coastal landmarks to help seafarers steer clear of perils, day and night.

The earliest known stone lighthouse that resembled the structures we know today, the Lighthouse of Alexandria, was built in Egypt over 2,000 years ago. Until the early 1900s, lighthouse keepers would live in accommodations on the property and be available around the clock to keep candles, coal, sperm whale oil, kerosene, paraffin, or gas flames burning.

Each lighthouse is unique, with signature colours or features to make them easily recognisable in daylight, too. As landmarks in the geographical sense, and in technological advances, these beacons continue to keep sailors safe. Additional safety equipment like foghorns and the electronic Automatic Identification System (AIS) are now standard in most lighthouses, and most are fully automated and maintained by official agencies.

With more than 23,500 lighthouses covering 598,675.5 kilometres (372,000 miles) of coastline around the world, they represent part of our collective history, adventure and the promise of safe havens in a stormy sea.

The Fresnel lens

Obviously, the further a lighthouse beacon can reach in the worst weather conditions, the better. During the 1600–1700s, mirrors, parabolic reflectors and Argand lamps created increasingly brighter beams. The Fresnel lens, invented in 1821, revolutionised the construction of lighthouses. Through layers of ring-shaped glass lenses, a light source could now be concentrated into a narrow beam, dramatically enhancing both the intensity and nominal range of light. This was likely the most significant development in lighthouse design until the introduction of electrical lights, and it is still in use today.

Fresnel lenses used in lighthouses are now often made of plastic, making them both lighter in use and cheaper to manufacture.

With modern, automated rotation functions and electrical light sources, they can create powerful range and enhance visibility. Fresnel lenses are also used in floodlights, ship lanterns and even in cameras.

To recreate the characteristic rotating light function, the LEGO® Ideas design team developed a LEGO version of the Fresnel lens. A lot of research went into replicating the original engineering of the lens, followed by performance tests to achieve a smooth and authentic experience.

Meet the Fan Designer

Sandro with his original model.

Sandro Quattrini (LEGO® Ideas name: Roses Must Build) is a 20-year-old film animation student from Canada. When not busy at university, he spends time with friends, or rearranges his LEGO collection, very often into new builds.

"I've been building LEGO sets since I was five years old. It's a way to unplug and relax. I love building tall structures. My mother loves lighthouses and has been telling me to build one ever since we took a trip around the Gaspésie Peninsula (Quebec) years ago. We visited enormous stone lighthouses on rocky beaches and small, abandoned wooden ones. From titanic structures that tower over their towns

to cosy little houses that sit calmly far away from civilisation, where all you hear is the sound of waves crashing against rocks. That's the essence I wanted to capture, and their solitary nature.

I built the lantern room first, then two sides of the tower and only then did I think of adding the turning-light mechanism! Everything took time and trial-and-error, and my limited selection of bricks forced me to be creative with shapes and techniques. It's a challenging and rewarding experience. It was a huge surprise when it reached 10,000 supporters. I didn't realise it had been featured on LEGO fan websites and blogs. I am so thankful for everyone's support. Enjoy building!"

Meet the LEGO® Lighthouse Keepers

"I am a huge fan of maritime history and lighthouses. They were mechanical and civil engineering marvels of the 19th century, with the sole, noble purpose of protecting mariners. Sandro's design was amazing, and I wanted the model to stay true to his original design. The challenge was to make the electronic components fit into the model without compromising the building process, looks or playability. I have enjoyed designing this model immensely, especially the lantern room, and I hope that people will enjoy building the model and discovering all the details we have incorporated into it."

*-Luka Kapeter,
LEGO® Senior Model Designer*

"We incorporated lots of graphic design details and references to Sandro and his passion. My favourites are the map of the Gaspésie Peninsula on the desk, the sepia photo of Sandro and his family and a 19th century 'portrait' as a nod to the era of the invention of the Fresnel lens. All the details really set the mood for the model."

*-Claus Tannebæk Madsen,
LEGO® Senior Graphic Designer*

"The lens design is dependent on several variable dimensions. The LEGO® System sets some of those dimensions in stone (like position of the light source compared to the lens itself), and that makes some parts of the design process easier and others more of a challenge. In the end I think we struck a nice balance, with a good light beam and the iconic look of a real lighthouse lens."

*-Peter de Fine Licht,
LEGO® Senior Play Designer, Elements*

Important information about batteries

Never use different types of batteries together, or a combination of old and new batteries. Always remove the batteries if the product is not to be used for a long time or if the batteries have run down. Never use damaged batteries. Only use alkaline type batteries. Insert the batteries so that the poles are correctly positioned. Never attempt to recharge non-rechargeable batteries. Never short-circuit the battery holder.

Wichtige Informationen zu Batterien

Benutzen Sie niemals unterschiedliche Arten von Batterien oder alte und neue gleichzeitig. Nehmen Sie stets die Batterien heraus, wenn mit dem Modell längere Zeit nicht gespielt wird oder wenn die Batterien leer sind. Verwenden Sie niemals beschädigte Batterien. Verwenden Sie ausschließlich Alkali-Batterien. Achten Sie beim Einsetzen der Batterien auf die richtige Polung. Versuchen Sie unter keinen Umständen, „normale“ Batterien wieder aufzuladen. Schließen Sie das Batteriefach niemals kurz.
